FATHOM / PostgresTool — Weekly Timesheet

Engineer: Dilip Patil | Week of: Jun 15 – Jun 19, 2026 | Project: PostgresTool frontend/backend dev & stabilization | Total hours: 40

Date	Day	Summary	Hrs
2026-06-15	Mon	Built core features: anomaly AlertRuleEditor, multi-engine ConnectionSwitcher, marketplace UI, httpOnly cookie auth, Sentry/Prisma + Zod validation. Shipped public landing page and login redesign; fixed Vercel TDZ/null-byte cold-start crashes.	8
2026-06-16	Tue	Stabilized React error #130 by moving panel/tab components to module scope; fixed performance tab rendering and PieCustomLabel. Resolved APM EmptyState crash, replaced synthetic data with real auto_explain rows, added new dashboard sections.	8
2026-06-17	Wed	Hardened auth: bounded /api/auth/me with a timeout so a slow backend can't pin the app on a spinner. Made FbLabel/FbInput props optional, applied misc code fixes, and reviewed/smoke-tested before deploy.	8
2026-06-18	Thu	Continued frontend/backend integration work (uncommitted WIP). Manual QA across dashboard tabs and issue triage.	8
2026-06-19	Fri	Performance: made /api/health lightweight by default to cut cold-start load. Fixed login spinner timeout and EmptyState icon default; end-of-week verification, deploy, and wrap-up.	8
		Weekly total	**40**

Summaries derived from version-control commit history for the week. Thursday reflects uncommitted work-in-progress.
